Overview of the RCMIN Conveyor Belt Arrestor

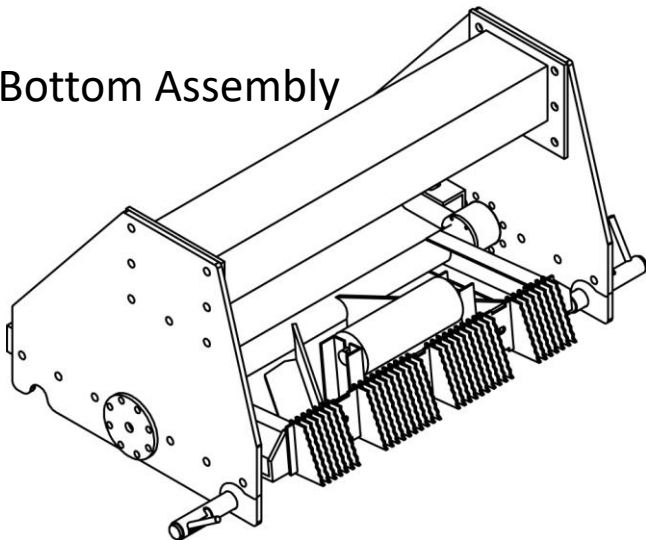

The RCMIN Conveyor Belt Arrestor is designed and developed to catch any incline conveyor belt that breaks or snaps due to normal wear and tear.

It traps both the top and bottom conveyor belt which prevents it from running back down the incline. The ends are then in close proximity to ease splicing.

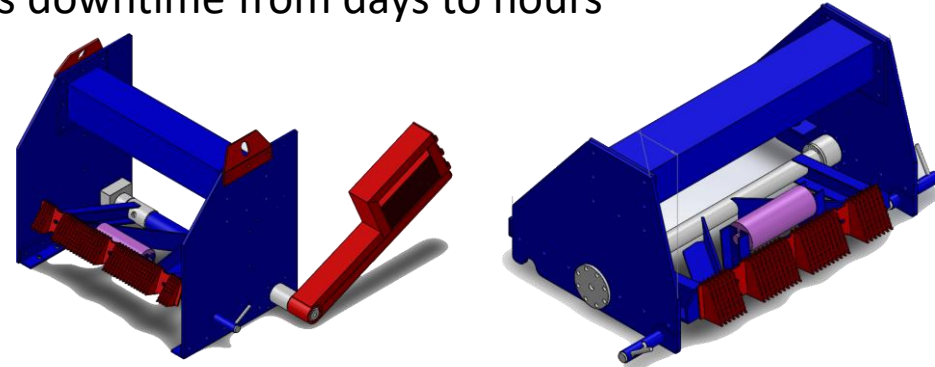

Top Assembly

Bottom Assembly

- Robust, practically maintenance free
- Limits damage to surrounding structures by timely arresting of belts
- Enhances safety and productivity, reducing risk of injury or fatalities
- Reduces downtime from days to hours

- Heavy-Duty option available where reaction forces exceed 600kN
- The RCMIN Conveyor Belt Arrestor unit is 100% mechanical and activates due to loss of tension of the conveyor belt.
- Easily reset after activation and can be used repeatedly.
- The RCMIN Conveyor Belt Arrestor is locally designed and manufactured to the highest standard

The logo for R&C Mining Consultants features a stylized 'R' and 'C' in blue and black on the left. To the right, 'R&C MINING' is written in a large, bold, black sans-serif font, with 'R&C' in blue. Below this, 'CONSULTANTS' is written in a larger, bold, black sans-serif font. Underneath the main text, the tagline 'INTEGRITY. INGENUITY. PURE PASSION.' is displayed in a smaller, blue, sans-serif font.
